7. Head
8. Brain.
General description and function.
Clinical problems:

9. Senses
Clinical problems: stroke, hematoma, hemorrhagia, Alzheimer’s disease

10. Completing and closing.
REGULATIONS

Department of Topographical Anatomy
for students of the 3-rd year

1. Only the students who comply the regulations of Anatomy Department are allowed to take part in seminars.

2. Presence on the seminars is compulsory and controlled. Each absence should be explained and student has to make up this workshop with the other group in the same week or in the different form (e.g. short presentation, speech) and it is necessary to pass the material at an assistant. This is a condition to receive a semester credit.

3. The seminars are lead in the groups, which are set at the beginning of each academic year by the Dean’s Office.

4. Course of Topographical Anatomy consists of 20 hours and is divided into 10 parts – meetings (2 hours/one time a week in one semester).

5. Each seminar is finished with the simple test (single choice). If the test is failed student is obliged to correct it on the last (10-th meeting).

6. In a very special situation the students who missed a seminar and have an explanation, but cannot make up the seminar, can be given a conditional credit if they get a permission of the Head of Anatomy Department and the Dean.
