Detailed information

Module objectives		The attainment target of biochemistry is analyzing vital processes at the molecular level and explaining connections between the structure and the function of biomolecules in the living organism . This knowledge is a base of understanding action of individual tissues and organs, and in consequence functioning of the entire organism in health and illness. It lets also consciously react to the appearance of pathological processes by implementing the effective treatment. It enables the tooth decay to take preventive action with reference to diseases associated with the progress of civilization . It also preparing students for studying of clinical objects is an attainment target of biochemistry.
Prerequisite /essential requirements	Knowledge	Student knows patterns of basic substances. Explains concepts: of atom, molecule, substance, a chemical reaction, the functional group. Recognizes and defines organic compounds: hydrocarbons, alcohols, aldehydes, ketones, acids, esters, ethers, amides, amines. Knows and classifies chemical bonds. Defines notions: of solubility, diffusion, osmosis, osmotic pressure, molarity. Knows notions: of solution, molar concentration, percentage concentration, normal setting, electrolytic dissociation, ion, anion, cation.
	Skills	Student is able to use the basic laboratory equipment (use the speedy pipette, measure appropriate volumes of solutions out, prepare solutions according to the recommended concentration, titrate). Performs chemical calculations based on knowledge of chemistry and mathematic. Knows principles of operation in a chemical laboratory. He is able to react actually in emergencies in a chemical laboratory (functioning of gobbling, flammable, poisoning associations, action of the highest temperature and e.c.).
	Competences	Student is able to work in a team and actually to perform tasks requiring the precision, acting according to the closely established procedure. He is able to behave responsibly in emergencies. A habit has self-educations.
