Detailed information

Module objectives		The aim of teaching prosthodontics is to acquire the information of the characteristics of fixed and removable restorations based on material technologies and laboratory procedures. As part of practical classes, the student performs individual laboratory stages of fixed and removable prosthetic restorations and participates in demonstrations of certain laboratory stages (casting, flasking, polymerization). The aim of teaching is also to acquire theoretical knowledge and practical skills allowing for independent work and making decision about indications, planning and carrying out the prosthetic treatment in simple cases of missing teeth with the use of removable partial dentures and fixed restorations. Acquiring of the necessary theoretical knowledge, improvement of practical and manual skills.	
Prerequisite /essential requirements	Knowledge	Knowledge of anatomy and physiology of head and neck tissues.	
	Skills	Knowledge of the principles for using dental units and equipment being in the equipment of clinical rooms, knowledge of using the equipment in technical laboratories.
